

## Year 12 Fashion and Textiles overview

One Seam Coat x 4  
lessons per cycle  
till Christmas

Practical skills and  
techniques x 2  
lessons per cycle

Core knowledge x  
5 lessons per cycle

Fashion illustration  
and CAD x 4  
lessons per cycle

NEA – After Easter  
All 11 lessons per cycle till summer

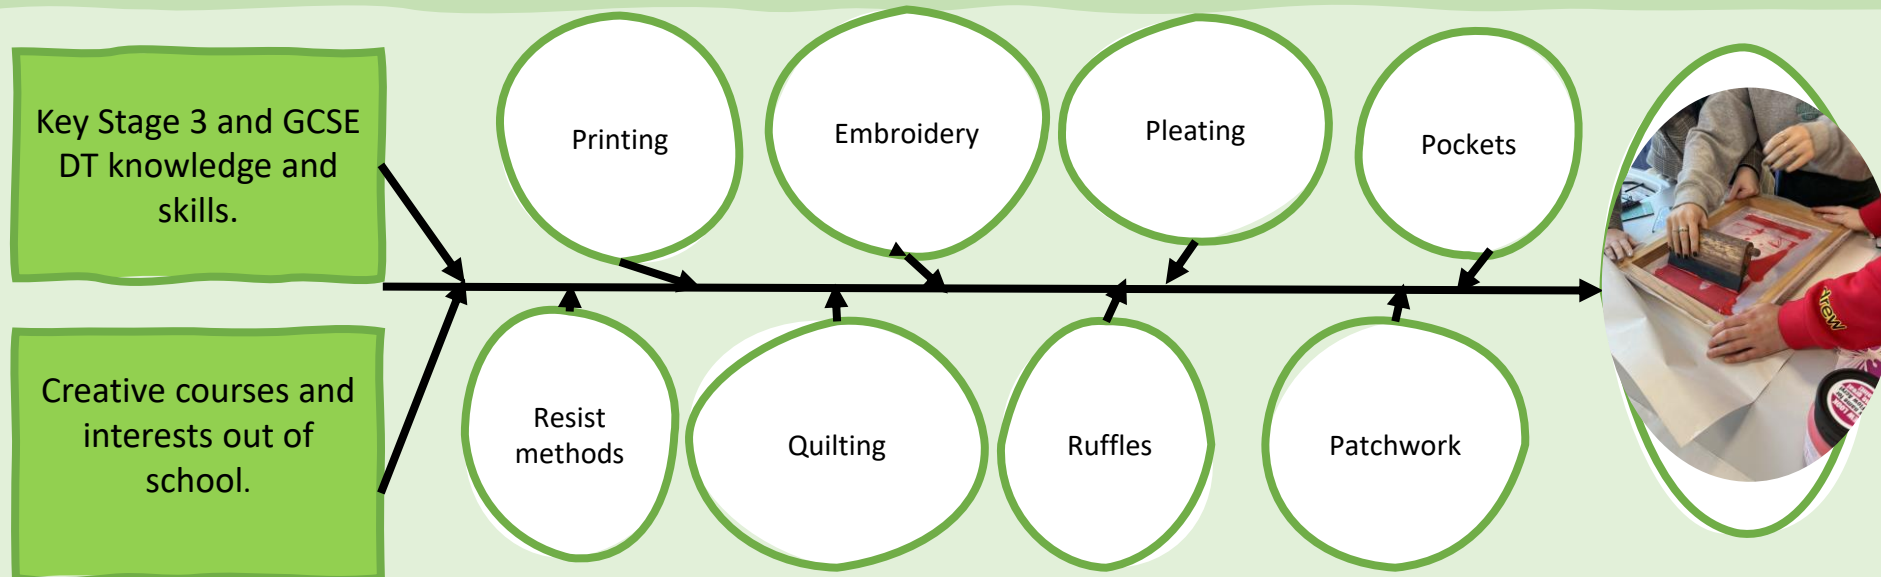

# Year 12 Practical Skills- Why do we study Fashion and Textiles?

We study Fashion and Textiles to develop technical knowledge and practical skills in areas such as drawing, fashion illustration, fabric technology, pattern cutting, computer-aided design (CAD), sewing and garment construction. As well as specific skills invaluable transferrable skills will be gained such as increased independence, visual awareness, creative thinking and problem solving, research and analytical skills and presentation skills.

We look back at what iconic products have been made, which designers influenced fashions throughout time, what life events and cultures determined what we wore, what technological advances were made to change what we wear today and what we might wear in the future.

The Fashion and Textile sector is diverse and covers a wide range of roles, from processing raw fibres, such as spinning weaving and dyeing, to sourcing new materials and products, manufacturing and production, textile technology, marketing branding and retailing, as well as Design.

You will be able to appraise standards and brands of merchandise and will develop the ability to distinguish quality in fabrics.
